The Welds Portfolio Display: Grade Your Own

Circle one box in every row. Be honest: I grade the same rows next. Display and sheet go on the shelf under the **Learn to Weld** poster before the bell.

Name _____ Period _____ Date _____

What Gets Checked

What gets checked	A	B	C	Try again
Coupon centers at 2", 5", 8", 11"	all four within 1/16"	within 1/8"	within 1/4"	spacing uneven, or a coupon in the initials zone
Centered across the bar, 1½" each side	both sides match within 1/16"	within 1/8"	within 1/4"	a coupon hangs off an edge
Square to the bar	all four square	one a little off	two off, you can see it	coupons crooked on the bar
Butt joint bevel	both edges beveled, small flat left at the root, groove filled flush	bevel uneven side to side	one edge barely ground, or no flat left	no bevel, or the root never fused
The four beads	full length, even ripples, no undercut, no holes	one bead runs thin or wide	uneven width, a cold start, some undercut	a joint missing, burned through, or a weld that breaks
Backboard and hole	16" within 1/16", hole placed right, edges deburred	within 1/8"	within 1/4", edges rough	no hole, or the bar is not 16"
Blasted clean	bright metal both sides, no mill scale, no spatter	a little spatter left	scale or slag left in spots	not blasted
Initials	readable, inside the bottom 2½", even bead	readable, bead uneven	hard to read, or outside the zone	initials missing

What I gave myself: _____ Mr. McAteer: _____

A is 90 and up, B is 80, C is 70. Try again means fix it and bring it back, no penalty for a rebuild. **Clear coat is the A.** A coat seals in whatever is under it, so nothing gets coated until it grades one, and a B does not keep on the shelf.

The One Row You Would Redo, and Why

Before You Walk Away

- ☐ Every row circled, and a grade written in
- ☐ Your name on this sheet, your initials on the display
- ☐ Display and sheet on the shelf under the Learn to Weld poster
